

Mobile access closes the loop on actionable findings notifications

PowerConnect Mobile Clinician lets users review, acknowledge, and manage PowerConnect Actionable Findings notifications on their Android or iOS mobile devices.

Clinicians “on the go” can receive and respond to actionable findings messages from radiologists or other diagnostic specialists anytime, anywhere. Users with administrative roles can reassign and forward messages just like clinicians. Additionally, with the optional PowerScribe Mobile Bridge, clinicians can search and view radiology reports and open orders from PowerScribe.

Closing the loop on actionable findings

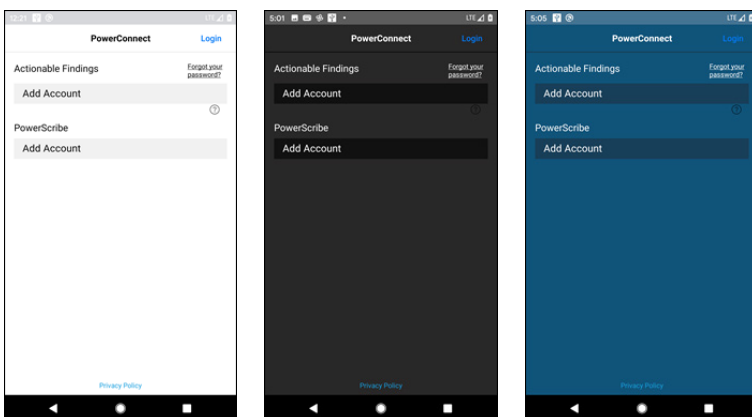

With the PowerConnect Mobile Clinician solution, users have access to actionable findings notifications right on their preferred Android or iOS device. Clinicians can quickly view their open and closed message queues. They can easily identify what has been acknowledged and be better positioned for the next steps in the patient care process.

Designed for ease of use

The Mobile Clinician application features a modern user interface with three optional color themes (light, dark, and blue modes). Tools for secure password setup and maintenance are at your fingertips. Biometric authentication options streamline access (fingerprint for Android, and fingerprint/Face ID/TouchID for iOS). And you can opt to install available updates at login, so your application always has the latest features and enhancements.

KEY BENEFITS

- **Enhances patient care** by enabling faster review of results and callback opportunity.
 - **Provides secure access** to search and view radiology results and open orders.
 - **Accommodates actionable findings communications** from multiple institutions within a single application screen.
 - **Streamlines access and optimizes usability** with biometric authentication, convenient management tools, and customizable features.
-

Three optional color themes available: light, dark, and blue modes.

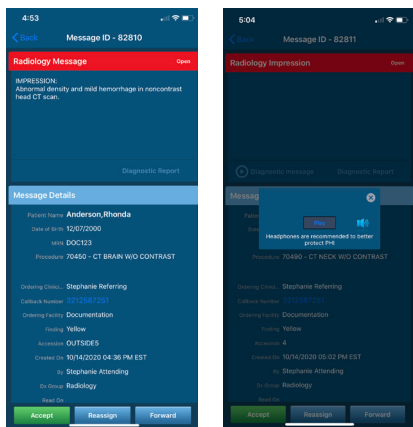

Receiving and accessing

“Push” notifications alert users that a new message is ready for review. Support for multiple accounts enables notifications from multiple institutions concurrently. Customizable security protects PHI before displaying messages.

Reviewing and responding

To respond and close the loop on a message, users simply touch Accept or Decline—there is no need to call into an automated phone system.

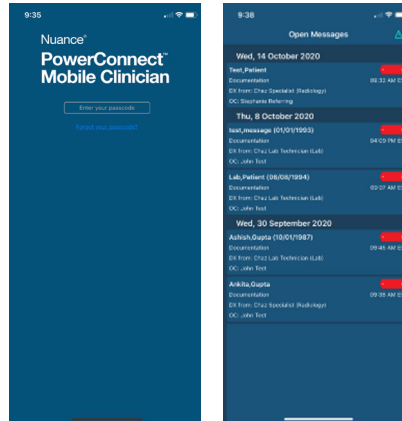

Reviewing and responding

Accessing orders and reports

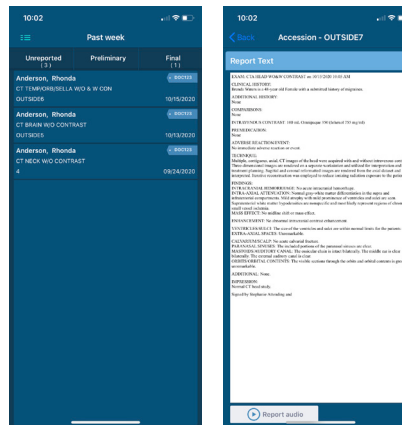

In conjunction with the PowerScribe Mobile Bridge, PowerConnect Mobile Clinician provides secure access to radiology orders and reports. Users receive push notifications when a new report is ready and can view it from their mobile device.

Receiving and accessing

A convenient callback feature makes it easy to connect directly with the radiologist or diagnostic specialist to discuss the finding. Response tracking is managed in the background by the PowerConnect Actionable Findings solution.

Accessing orders and reports (with Mobile Bridge)

REQUIREMENTS

- Viewing orders and reports requires the PowerScribe Mobile Bridge and PowerScribe One or PowerScribe 360 Reporting v2.0 or later.
- Mobile Clinician functionality is only available for customers using PowerConnect Actionable Findings.
